

The Boobatron

Sound in

Processes analog mic signal into 7 frequency bands, sends to Arduino

Uses frequency info to send pattern commands to LED strips

RGB LEDs chained together with shift registers transmit info down the strip and light up according to instructions from Arduino

Hat and Leg Warmers

Sound in

Mic

Wireless

Arduino tells Xbee module to transmit equalizer & pattern info to receiver Xbees

Processes analog mic signal into 7 frequency bands, sends to Arduino

Uses frequency & motion info to send pattern commands to LED strands

Motion

Accelerometer gives measure of 3D motion

RGB LEDs chained together with shift registers transmit info down the strand and light up according to instructions from Arduino (intrinsic PWM)

Hat and Leg Warmers

Sound in

Mic

Wireless

Arduino tells Xbee module to transmit equalizer & pattern info to receiver Xbees

Transmitting Leg

Processes analog mic signal into 7 frequency bands, sends to Arduino

Motion

Accelerometer gives measure of 3D motion

Uses frequency & motion info to send pattern commands to LED strands

Hat

Other leg

RGB LEDs chained together with shift registers transmit info down the strand and light up according to instructions from Arduino (intrinsic PWM)

LED Matrix Thingy (we're working on a name)

Pinguino takes in analog mic signal, processes into frequency space, and then drives the RGB matrix display.

LED Matrix work with Sudhu Tewari
